Pictured is an artists representation of what a day outside of the proposed OpenLuna outpost might look like. Activities seen include landing new crew members and rovers, returning from a scientific survey with a sample cart, training on tele-operated rovers, and leaving the outpost to greet the new arrivals. Note the same lander design is used for both humans and cargo, saving costs. Also note the three different types of suits in use, showing interoperability with other agencies. Art by Kelley Sands
