

The OpenLuna Foundation aims to return mankind to the Moon through private enterprise. Initial goals focus on a stepped program of robotic missions in four to five years coupled with an extensive education and public outreach campaign. Within a year following these robotic missions, a short series of manned expeditions will culminate in the construction of a small outpost (pictured on reverse) at a location scouted by the rovers. This is an ambitious project, but with a determined team effort, our worthy goals will be achieved.

This is an Open Source project, meaning that all of our hardware, software, research and data are open and available to *everyone*. This means that *you* can participate in many, if not all, elements of the project. This is *your* project! We will be making use of people from all walks of life, from individuals to students, university teams to professionals. We need help from people in most every field from engineer to artist, from scientist to accountant, and everyone in between. ***Come join us now!***

Some of our University partners include:

- University of Western Ontario
- Oakland University
- University of North Dakota

Some of our Industry partners include:

- Micro-space
- Narked at 90 ltd.
- Webb Elastic Garments Group
- Alpine Systems Engineering, ltd
- Avalanche Productions
- New Horizons Shipyards

Assisting Google Lunar X-Prize teams:

- Team Microspace
- Team Frednet

...And our most important partners - hundreds of supporters like you!
